

**Supplemental Table 1.** Results of the addition of birth weight to CVD risk prediction model including BMI in a population containing only Hispanic and African American subjects

Model‡	β	SE	HR (95% CI)	P Value
<2.72kg	0.252	0.189	1.287 (0.889, 1.864)	0.182
3.60 - <4.54kg	0.070	0.198	1.073 (0.728, 1.581)	0.723
≥ 4.54kg	0.238	0.366	1.269 (0.619, 2.601)	0.515

‡ N=3,919

\*Population contains only Hispanic (N=1,090) and African American (N=2,278) subjects

Reference group = birth weight 2.72 – <3.60kg; β, beta coefficient of proportional hazards analysis; SE, standard error; HR, hazards ratio
